

# Quality, Environmental, Health & Safety Policy

---

At General Dynamics Land Systems – Canada we are the innovative, strategic partner in land defence. We achieve this by anticipating and providing exceptional solutions for our customers; while protecting the local and global environment and maintaining the health and safety of the people working under our control.

As part of our ongoing commitment to external customer satisfaction, we minimize risk through our quality, environmental, health & safety processes in the following ways:

- Committing to comply with all compliance obligations to which the Company subscribes, which relate to its Quality, Environmental and Health and Safety (QEHS) Management System
- Considering QEHS impacts, risks and opportunities in business strategies and business processes
- Protecting the environment through prevention of pollution, reducing waste and minimizing the consumption of resources
- Protecting our employees and those people under our control through the development of safe and healthy work processes
- Educating, training and motivating employees to remain focused on quality and to execute initiatives in an environmentally responsible and safe manner. In addition, we will ensure a continual professional development strategy that remains core to our business goals.

The Company is committed to continual improvement and enhancement of its QEHS Management System and related performance. Objectives to facilitate these commitments are set and reviewed by top management on an annual basis. Cornerstone to our QEHS system is organizational training, participation and empowerment. We all share the responsibility of ensuring our system's success.
